

Scape

We've Changed

The world moves on and so have we. Scape is the new company for CLASP. We have modernised our entire operation without losing sight of our fifty years of invaluable knowledge and experience. Our new identity represents changes that we have made to our system build technology, service delivery and operational efficiency

We are pleased with the progress that has been achieved in the build up to the launch of Scape on 1 April 2006. The changes we have made will bring major benefits to our Customers by providing better design reduced costs, faster construction, increased flexibility and a huge leap forward in delivering high quality, long term system build solutions

Scape is; a Local Authority controlled Company, wholly owned by 6 of the full members of CLASP and a Contracting Authority and Central Purchasing Body under the EU Procurement Directives.

Our Business

The essence of Scape's business is being a vehicle for improvement in:

- Design quality
- Technology which is sustainable and uses modern methods of construction
- Documentation to capture knowledge
- Processes which enable people to collaborate
- The whole supply chain from framework contractors to product manufacturers

We establish frameworks for new building procurement and refurbishment work streams, currently replacement windows and roof recovering.

Through our consultancy we deliver Scape Technology and project support services for structural engineering and architecture and refurbishment advice for system buildings.

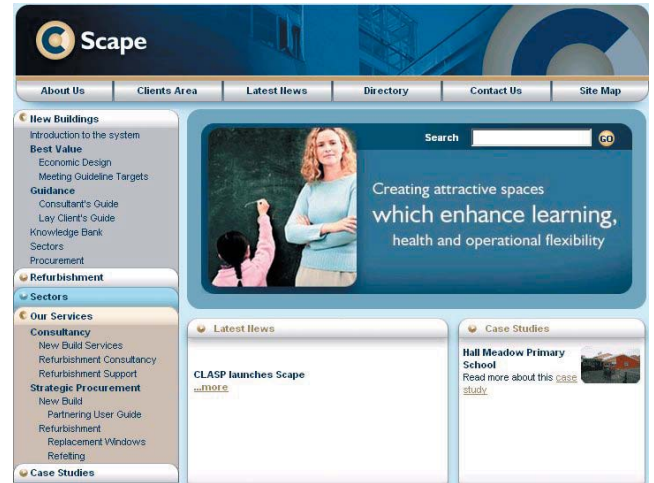

Headlines

May 2006

Scape does not intend to stand still, more technical developments are to be introduced shortly to enhance sustainability and adaptability in projects using Scape Technology. A recladding programme for system buildings is planned together with an LABC Type approval for the Scape Technology.

Contacts

Be part of this change contact David Mackness, davidm@scapebuild.co.uk, or call on direct line 0115 852 3811.

Visit our web site www.scapebuild.co.uk to see case studies of our work and to download documents. Further details will be sent to CLASP members on how they can download a wide range of technical material and access the knowledge bank to obtain CAD project details and NBS specifications.
